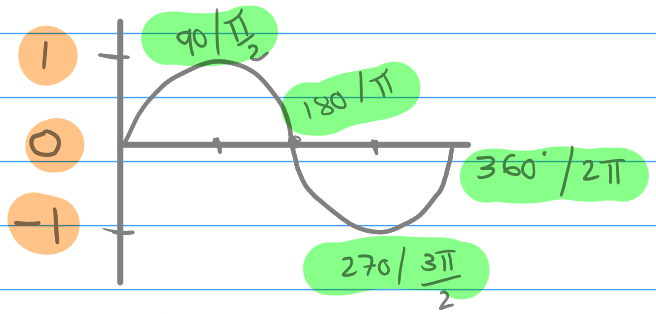
TRIGONOMETRY

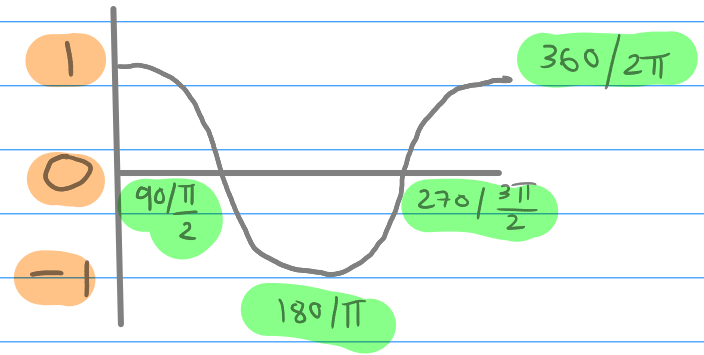
Including

TRIG. GRAPHS

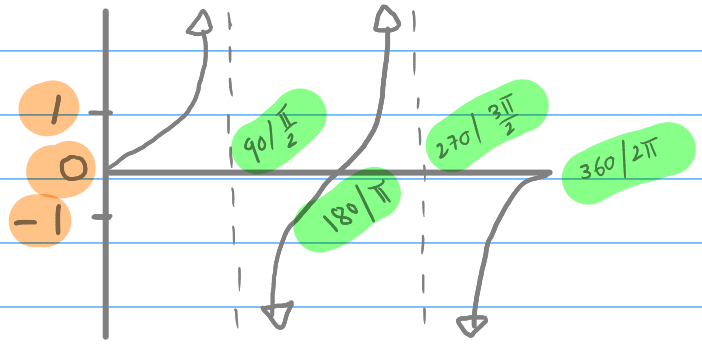
sin θ



cos θ



tan θ



degrees | radians

Convert:

radians to degrees

$\theta \times \frac{180}{\pi}$

degrees to radians

$\theta \times \frac{\pi}{180}$

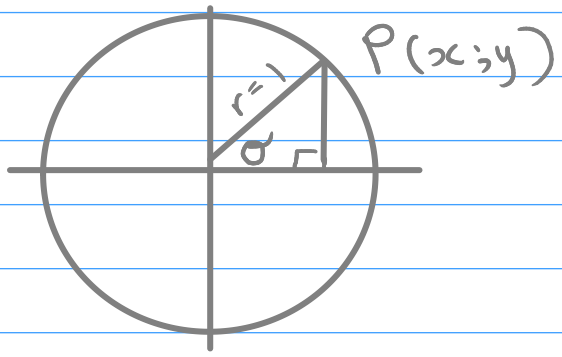
General form: $a \cdot \sin bx + q$

- q: shift (+ / −)
- a: reflect over x-axis; amplitude — max to min; horizontal stretch/squish intuitive; $a > 1$ longer; $-1 < a < 1$ $a \neq 0$ shorter
- b: vertical squish/stretch; counter intuitive; $b > 1$ shorter; $-1 < b < 1$ $b \neq 0$ longer

UNIT CIRCLE

A circle with radius = 1

$x^2 + y^2 = 1$



$\cos\theta = x$

$\sin\theta = y$

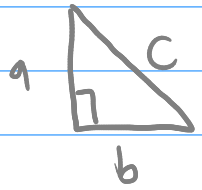
$\tan\theta = \frac{y}{x}$

OTHER USEFUL NOTES:

$S^{O}_{H} C^{A}_{H} T^{O}_{A}$

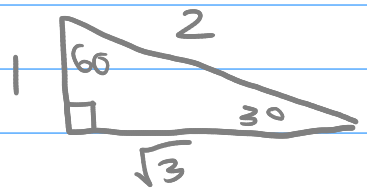
$S^{y}_{r} C^{x}_{r} T^{y}_{x}$

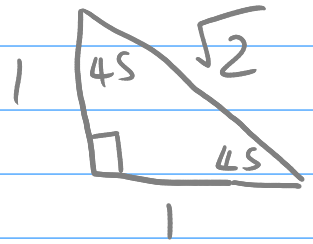
Pythagorus



$a^2 + b^2 = c^2$

SPECIAL TRIANGLES



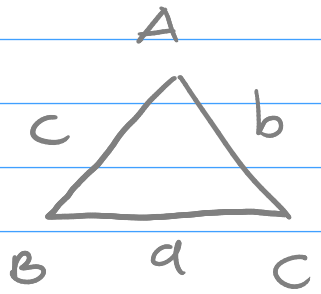


ANGLES OF INCLINATION

$\tan\theta = m$

AREA RULE

In ΔABC



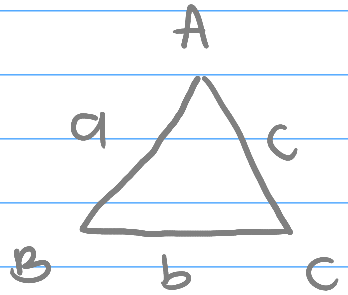
$$\text{Area} = \frac{1}{2} \cdot a \cdot b \cdot \sin \hat{C}$$

$$= \frac{1}{2} \cdot a \cdot c \cdot \sin \hat{B}$$

$$= \frac{1}{2} \cdot b \cdot c \cdot \sin \hat{A}$$

Cos rule

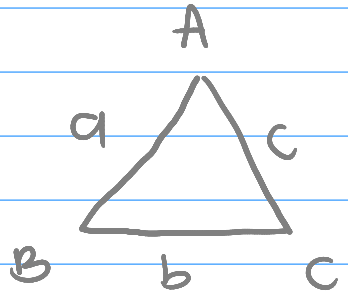
In triangle ABC



$$a^2 = b^2 + c^2 - 2(a)(b)\cos \hat{C}$$

Sin rule

In triangle ABC



$$\frac{a}{\sin \hat{A}} = \frac{b}{\sin \hat{B}} = \frac{c}{\sin \hat{C}}$$

REDUCTION FORMULAE (180° / 360°)

sin / cos / tan (obtuse or reflex angle) <=> ± sin / ± cos / ± tan (acute <)

the CAST diagram shows where each will be positive:

degrees or radians

S	A
π − θ 180 − θ	θ
180 + θ π + θ	360 − θ 2π − θ
T	C

→ off the x-axis

CO-RATIOS (for 90°)

sin (90° + θ) <=> cos θ
sin (90° − θ) <=> cos θ
cos (90° + θ) <=> − sin θ
cos (90° − θ) <=> sin θ

→ if you remember this one, the others just swith cos / sin

in radians:

sin (π/2 + θ) <=> cos θ
sin (π/2 − θ) <=> cos θ
cos (π/2 + θ) <=> − sin θ
cos (π/2 − θ) <=> sin θ

TRIG IDENTITIES

Quotient identity

$$\tan\theta = \frac{\sin\theta}{\cos\theta}$$

Pyth. Identity

$$\cos^2\theta + \sin^2\theta = 1$$

DOUBLE ANGLE FORMULAE

$$\sin 2\theta = 2\sin\theta\cos\theta$$

$$\begin{aligned}\cos 2\theta &= \cos^2\theta - \sin^2\theta \\ &= 2\cos^2\theta - 1 \\ &= 1 - 2\sin^2\theta\end{aligned}$$

COMPOUND ANGLE FORMULAE

$$\sin(A+B) = \sin A\cos B + \cos A\sin B$$
$$\sin(A-B) = \sin A\cos B - \cos A\sin B$$

$$\cos(A+B) = \cos A\cos B - \sin A\sin B$$
$$\cos(A-B) = \cos A\cos B + \sin A\sin B$$

GENERAL SOLUTION

Gives every possible answer considering that trig graphs are repeating.

STEPS:
1. Determine the positive reference angle
2. Apply the reference angle to the relevent quadrants
3. Simplify and don't forget $n \in \mathbb{Z}$

Example 1

given $\tan x \sin x + \cos x \tan x = 0$

Determine the general solution.

Answer:

1. $\tan x \sin x + \cos x \tan x = 0$

$\tan x (\sin x + \cos x) = 0$

$\therefore \tan x = 0$ or $\sin x + \cos x = 0$

$x = \tan^{-1}(0)$

$= 0$

$\sin x = -\cos x$

$\frac{\sin x}{\cos x} = -1$

$\tan x = -1$

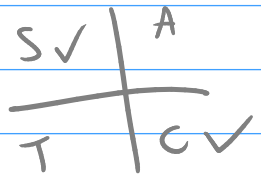
$x = \tan^{-1}(-1)$

$= (-)\frac{\pi}{4} / (-)45$

∴ reference angles :

$x = 0$ or $x = 45 \mid \frac{\pi}{4}$

(2) tan is negative in quadrant 2 and 4



tan period of 180

(3) $\therefore x = 180 - 0 + n180$

$= 180 + n180 \quad (n \in \mathbb{Z})$

or $x = 360 - 0 + n180$

$= 360 + n180 \quad (n \in \mathbb{Z})$

or

$x = 180 - 45 + n180$

$= 135 + n180 \quad (n \in \mathbb{Z})$

or

$x = 360 - 45 + n180$

$= 315 + n180 \quad (n \in \mathbb{Z})$
